COO	TURKEY

### PRODUCT OVERVIEW

A surgical mask is intended to prevent the release of potential contaminants from the user into their immediate environment which can also protect the wearer from large droplets, sprays and splashes of bodily fluids. It is easily identifiable by the presence of two ear loops to secure the mask to the face for quick donning.

Surgical masks are used on hospital floors, isolation units, and labor and delivery units, among other areas of the hospital for generally to prevent clinicians, patients and visitors from spreading germs by talking, coughing or sneezing.

These masks may also be used in the emergency department and the intensive care unit. However, beware that some specifications are non-sterile and designed for clean environments which not suitable for use in the operating room.

Our disposable surgical masks contain 3 layers: a mix of non-woven fabric and a middle melt-blown material that acts as a filter. They provide physical barrier that protects both wearers and others from the transfer of respiratory secretions, fluids or other debris and avoid the contamination of bacteria or viruses present in mucus and saliva.

### WASHING INSTRUCTIONS

Our products do not have a washing feature.

### REGULATORY INFORMATION

Product CE marked as per 93/42/EEC Directive on Medical Devices.  
Class of the device: I.

**Product compliant with EN14683**
